

Pro Series High-Rate Sand Filters

Relax, A Pro[™] Is Cleaning Your Pool

Pro[™] Series High Rate Sand Filter

HAYWARD[®]
America's #1 Pool Water Systems

Pro™ Series

SAND FILTERS FROM HAYWARD

Exclusive full-flow 360° self-cleaning laterals provide for energy-efficient operation, and thorough backwashing.

Model S180T1580ST Pro Series System with Power-Flo Plus automatic pump/timer.

Everything is easy when you're working with a Pro. Because the Pro Series High-Rate Sand Filter System from Hayward offers advanced full-flow technology that results in sparkling pure water, energy efficient operation, and good, clean fun for the entire family.

It's also simple to operate. The Pro Series six-position Vari-Flo™ control valve lets you quickly and effortlessly select the desired pool filter function with just a gentle twist of the wrist.

Plus, its rugged, corrosion-proof tank construction protects these liquid assets for a long, long time.

All of which makes the Pro Series filter a crystal clear choice.

Why you should go with the flow.

The Pro Series filter features an integral top diffuser that evenly distributes unfiltered water over the sand media bed in a cascading, umbrella-like pattern. This allows the greatest filtration possible from each and every square inch of sand.

Then the Pro's unique, self-cleaning underdrain assembly, with its 360° slotted laterals, provides a fast, balanced flow of clear water back to your pool. It also allows for more thorough backwashing.

Best of all, the Pro's full-flow technology reduces energy costs because you operate the filter for shorter periods.

Which makes operating the Pro Series as easy on your wallet as it is on you.

Evenly distributed, umbrella-like pattern of unfiltered pool water over sand media bed, assures the greatest filtration possible.

Unique folding ball joint design allows easy access to lateral assembly for simple servicing.

Each lateral is precision installed and can be removed individually, or as a complete unit.

Built-in Convenience.

Hayward's value added technology addresses convenience as well. The Pro Series laterals incorporate a unique folding ball-joint design which allows the assembly to be easily accessed for simple servicing.

Each lateral is precision

The Pro's six-position valve puts you in control.

The patented, multi-port control valve developed by Hayward was designed with six pool filter positions. It couldn't be simpler. An easy-to-use lever-action handle lets you quickly dial any of these functions: filter, backwash, rinse, waste, closed, or recirculate. This is what gives you complete control over our full-flow technology.

Six-position control valve lets you easily select desired pool function with just a gentle twist of the wrist.

Corrosion-proof construction filters out the elements.

To protect against severe weather conditions, the Pro Series filter is constructed of rugged, durable, color-fast polymeric material. Which will keep your Pro running in tip-top shape for years to come.

See a Pro today.

Pro Series filters are engineered with today's latest filtration technology. They're dependable, durable, and easy-to-live with.

But most of all, they keep your pool crystal clear and inviting.

Why not see one today. And see for yourself how easy it can be to have a Pro cleaning your pool.
