

Compool Lx220 Solar Control System

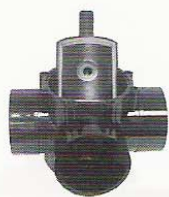

The Lx220 control panel lets you set your desired pool temperature, then automatically sends water to the solar collectors when conditions are just right.

Effective and Economical Heating
There is generally no need for an additional solar booster pump.

With the Lx220 system, your existing filter pump is used to pump water through the solar collectors.

The Compool PTV-2TS Solar Valve is the only one of its kind to automatically drain the solar collectors when the pump shuts off. It also features a durable Teflon® seal which offers years of maintenance free operation.

The CVA-24 Valve Actuator is built to last, with sturdy steel gears, a reliable low-voltage motor, and a weather-proof composite enclosure.

Lx220/2Tx System Includes

LX-220	Solar Controller.
CVA-24T	Valve Actuator.
PTV-2TS	2" Solar Valve.
TS-5T	Water Temperature Sensor.
TS-5T	Solar Temperature Sensor.

Accessories

2COND	Solar sensor hook-up cable.
HW-5B	Electric drain-down valve for glazed collectors.
RLY-SC	Relay kit for pool cleaner or booster pump.

Additional Features

Pool Cleaner Protection- Protects pool cleaner pump from damage caused by air in the solar collectors at start-up. Requires relay kit RLY-SC.

Solar Booster Pump- For use in systems which utilize a booster or independent solar pump. Booster pump is activated when solar energy is available. Requires relay kit RLY-SC.
