MiniMax® 100

High Performance Heater For Inground Spas

**Nobody outheats us.
Nobody outlasts us.**

Today's heaters from Pentair make extending your pool and spa season, adding to your comfort, and maximizing your backyard enjoyment a surprisingly affordable addition. They heat up fast. They are economical to run. And they're built to last for many years. The key to spa heating economy is combustion efficiency...making sure the heat generated is transferred to spa water with as close to 100% efficiency as possible. This requires an optimum combination of combustion chamber design, burner assemblies and materials, heat exchangers, and state-of-the-art heater insulation. That's why all Pentair heaters feature strong corrosion resistant stainless steel burners, durable bronze headers, and weatherproof powder-coated housings. MiniMax 100 also includes ceramic fiber tile insulation and "intelligent" controls that sense water temperature and pressure for optimum flow.

The MiniMax 100 is a compact, low-profile heater that's big on efficiency, performance, and convenience. With an input of 100,000 BTUs, the MiniMax 100 is the perfect size for heating even the largest inground spas. And best of all, it costs surprisingly little to operate.

Standard features include:

- Energy-efficient design for minimal fuel consumption and low operating cost.
- Quiet and dependable operation from proven packaged burner system.
- Stainless steel burners for long life.
- Ceramic tile insulation prevents heat loss for greater heat transfer efficiency.
- Low-profile design with rounded corners for pleasing appearance.

MiniMax® 100

High Performance Heater For Inground Spas

Designed specifically for inground spas

The MiniMax 100 is designed for fast heat-up, low operating costs, and long life. It's available in reliable direct-spark ignition and millivolt versions for propane or natural gas.

Additional features include:

- Built-in vent top for efficient combustion.
- Bronze headers for durability.
- User-friendly controls make operation simple and trouble-free.
- Flow valve senses both water temperature and pressure for optimum flow.
- One-year warranty. See warranty for details.
